That's sufficient. Thanks a lot for your help. Haven't heard anything on the file review. Probably won't be able to give you an answer until Monday on when that may happen.

Subject: metals at Des Moines TCE/Dico

Tonya:

I can give you a really rough number for metals. Based upon soil data collected by Eckenfelder and found in the B&V RI report, there were at least 22 metals detected. Of course, most metals are naturally occurring. However, I noticed at one boring there were some high levels of arsenic, lead, copper and mercury. I didn't compare anything to any published screening criteria.

Does that help at all. If not, I can do some more searching on Monday. I have to leave early today.

Thanks,

Mike
